

Climate Transition Global Investment Grade Credit Fund

OBJECTIVES AND PROCESS

- Seeks total return, maximising investment income whilst preserving capital.
- Invests two-thirds of its assets in investment grade credit debt, graded such at the time of purchase, securities issued by corporate issues domiciled anywhere in the world.
- May invest up to one-third of its total assets in below investment grade debt securities
 - Will hedge non-US\$-denominated investments to the US dollar.
 - Will target to decarbonise the Sub-Fund by 2050
 - Uses a negative screen to exclude securities issued by companies based on their exposure to ESG risks
- May also use derivatives, for hedging, efficient portfolio management or for investment purposes.
- Focus on bottom-up credit research with a focus on well-underwritten credits and relative value.
- Seeks to balance income whilst aiming for a competitive yield to drive total returns

KEY RISKS

Debt securities risk: debt securities are subject to credit risk and interest rate risk and are affected by an issuer's ability to make interest payments or repay principal when due. **Global investment risk:** securities of certain jurisdictions may experience more rapid and extreme changes in value and may be affected by uncertainties such as international political developments, currency fluctuations and other developments in the laws and regulations of countries in which an investment may be made.

High yield securities risk: high yield securities are rated below investment grade, are predominantly speculative, have a much greater risk of default and may be more volatile than higher-rated securities of similar maturity.

Derivatives risk: the use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying asset, index or rate, which may be magnified by certain features of the derivatives. **ESG risk:** applying an ESG screen for security selection may result in lost opportunity in a security or industry resulting in possible underperformance relative to peers, ESG screens are dependent on third party data and errors in the data may result in the incorrect inclusion or exclusion of a security.
